

## **Sierra College Community Education Partners with QuickStart To Offer Software Development Bootcamps**

Sierra College Community Education has partnered with QuickStart Learning to offer online Back End and Front End Software Development bootcamps. These fully online, 18-week programs are designed to assist learners with the practical and technical skills to launch successful careers in software.

**Rocklin, CA – 5/12/25** – Sierra College Community Education is expanding its career training offerings through an exciting new partnership with QuickStart Learning. This collaboration will provide learners in the region with a fast-track pathway to technology careers through Back End and Front End Software Development bootcamps.

Designed for individuals looking to enter or advance in the tech industry, these online bootcamps provide comprehensive, hands-on training in high-demand software skills. Participants will learn industry-standard programming languages, frameworks, and tools to prepare them for real-world software development roles.

Jill Alcorn, Interim Dean of the Business and Technology Division, stated, “We’re excited to partner with QuickStart to expand the career development opportunities offered through Sierra College’s Community Education program. Their cutting edge bootcamps will create dynamic new pathways for our students!”

The Back End Software Development Bootcamp focuses on server-side programming, databases, and API development, equipping students with the skills needed to build and maintain the backbone of web applications. Meanwhile, the Front End Software Development Bootcamp emphasizes user interface design, responsive web development, and client-side programming, preparing students to create dynamic and engaging web experiences.

Both programs are 18 weeks long and follow a “flipped” classroom model, where students review the curriculum before lectures and arrive prepared to engage with relevant concepts in class. This guided online instruction allows students to learn at their own pace while receiving mentorship and support from experienced industry professionals. No prior programming experience is required, making these bootcamps accessible to career changers and entry-level learners.

Bootcamp participants will be career-ready for roles such as software developers, web developers, and application engineers in various industries, including technology, finance, healthcare, and e-commerce upon program completion.

“We are thrilled to partner with Sierra College Community Education to increase access to tech training needed to keep up with the demands of a rapidly evolving digital landscape.” Said Nick Suwyn, VP of Partner Growth at QuickStart. “These programs will help California residents enter high-demand tech careers, while also helping companies fill the skills gap.”

Enrollment for each of these bootcamps is now open on a rolling cohort basis. Interested individuals can learn more about the programs by visiting <https://promineotech.com/sierra-college-software-engineering-bootcamp> or contacting admissions at [844.362.7942](tel:844.362.7942).
